H A V S

(Hand Arm Vibration Syndrome)

NEW;- LARSON DAVIS HVM100 TRIAxIAL VIBRATION MONITOR

Are you sure that you have protected your work force properly ensuring that they will not be suffering from H A V S in the future, or are you unsure of the Occupational Exposure Limits on a particular item of plant.

In an ever-increasing world of safety issues H A V S is a condition that is gripping the Construction Industry with fear, however we at Elmcrest Diamond Drilling Ltd have taken the condition extremely seriously and now have the equipment at our disposal for monitoring the vibrations emitted from every piece of equipment. This applies not only to breaking tools but diamond cutting tools as well.

You would be amazed how many different items of plant now fall below the recommended daily exposure to vibrations, so worry no more check your tools on site on the actual task being performed, this is already a requirement by a vast majority of Safety Managers who do not believe in the (often incorrect) manufacturers figures.

Human Vibration Solutions

For further information on quotations or getting your plant tested please contact Mr Patrick Southin on either 020 8318 9923 or 07973 186537.
